A METHODOLOGY TO REACH HIGHER CRITICAL THINKING LEVELS IN MANAGEMENT OF TECHNOLOGY

César Eduardo Avendaño Acero, David Güemes Castorena. Tecnológico de Monterrey, Campus Monterrey

Abstract
The primary goal of technology management is to create a competitive advantage in an organization. There are different activities to be done to foster this goal. The activities are established based on the organization needs, where most of them are related to the transfer of information and knowledge. Organizations have recognized the importance of applying knowledge to make decisions based on the information they have. The objective of this research is to provide a model on how to improve the learning process - from knowledge awareness to its application - to improve the quality of the decision making process in a technology organization. The present work is based on the Bloom's taxonomy and The New Taxonomy of Educational Objectives. The proposed methodology encourages the application of the acquired knowledge to reach the higher critical thinking level.

Keywords: technology management, critical thinking, Bloom’s taxonomy, taxonomy, educational objectives
